### **Safety Precautions**

- The design of this product contains special hardware. Many circuits and components specially for safety purposes.
  - For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Repacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
- Alterations of the design or circuitry of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
- 3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by ( ) on the schematics and parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list in Service manual may create shock, fire, or other hazards.
- 4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and/or the like to be separated from live parts, high temperature part, moving parts and/or sharp edges for the prevention of electric shock and fire hazard.
  - When service is required, the original lead routing and dress should be observed, and they should be confirmed to be returned to normal, after re-assembling.
- 5. Leakage current check
  - (Safety for electrical shock hazard)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the Products (antenna terminals, knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

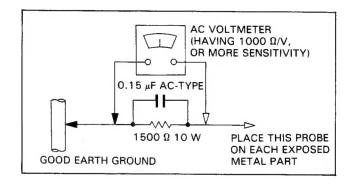

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5 mA AC (r.m.s.).
- · Alternate check method.

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1500  $\Omega$  10 W resistor paralleled by a 0.15  $\mu$ F AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.)

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

### **Features**

- 1. Fashionable stereo radio double cassette recorder with triple speed dubbing facility.
  - · Listen to one source while recording another or while dubbing.
  - Single pause release button for decks A and B to start dubbing simultaneously.
  - Single music scan mechanism in both direction (Deck A).
    - "Under license from Staar S.A., Brussels, Belgium."
  - Continuous playback from deck A to deck B.

- Simultaneous mixing/recording facility.
- Built-in microphone (monaural).
- · Beat cut switch.
- 2. Total output of 12 W (6 W+6 W) Max. (3.2  $\Omega$ ), 5 W per channel at 10% THD (3.2  $\Omega$ ).
  - 2-way power supply (AC power cord or batteries).
  - 10 cm (4") full range speaker  $\times$  2.
  - AUX IN pin jacks.
  - DIN jack.

### **Specifications**

Speakers

: 10 cm (4")  $\times$  2, 3.2  $\Omega$ 

Frequency ranges

: FM 88-108 MHz

MW 540-1600 kHz 6-18 MHz SW

LW 150-350 kHz

**Antennas** 

: Telescopic antenna for FM & SW

Ferrite core antenna for MW & LW

Track system

: 4-track 2-channel stereo

Motors

: Electronic governor DC motor for

capstan × 2

(for Deck A & B)

Heads

: Deck A; Hard permalloy head for playback Dummy head for erasure Deck B; Hard permalloy head for recording/playback, 2-gap ferrite

head for erasure

Tape speed

: At normal speed:

4.8 cm/sec (1-7/8 inch/sec)

At triple speed;

14.3 cm/sec (5-3/4 inch/sec)

Frequency response: 60-13,000 Hz Wow and flutter

Fast wind time

: 0.16% (WRMS) : Approx. 110 sec.

Input terminals

(C-60 cassette) : MIC × 1 (Min. input level: 2 mV

(-54 dBV)

Matching impedance:

 $(200 \Omega - 2 k\Omega)$ 

AUX  $\times$  2 (250 mV/47 k $\Omega$ )

Output jacks

: PHONES × 1 (Output level:

 $0\sim60 \text{ mW/}32 \Omega$ , Matching

impedance:  $8 \Omega - 32 \Omega$ )

DIN (REC/PB) jack

: Min. input level: 0.6 mV/k $\Omega$ Input impedance: 10 k $\Omega$ 

Output level: 0.3 V Output impedance: 10 kΩ

Power output

: Total output of 12 W (6 W + 6 W) Max. (3.2 Ω), 5 W per chan-

nel at 10% THD (3.2 Ω)

Power sources

: AC 240/220/110 V, 50/60 Hz

DC 12 V ("R14"×8)

Power consumption

: 17 watts (with power switch on)

1.1 watt (with power switch off)

**Dimensions** 

: 532(W) × 149(H) × 133(D) mm

 $(21" \times 5-7/8" \times 5-1/4")$ including knobs and handle

Weight

: Approx. 3.9 kg (8.6 lbs)

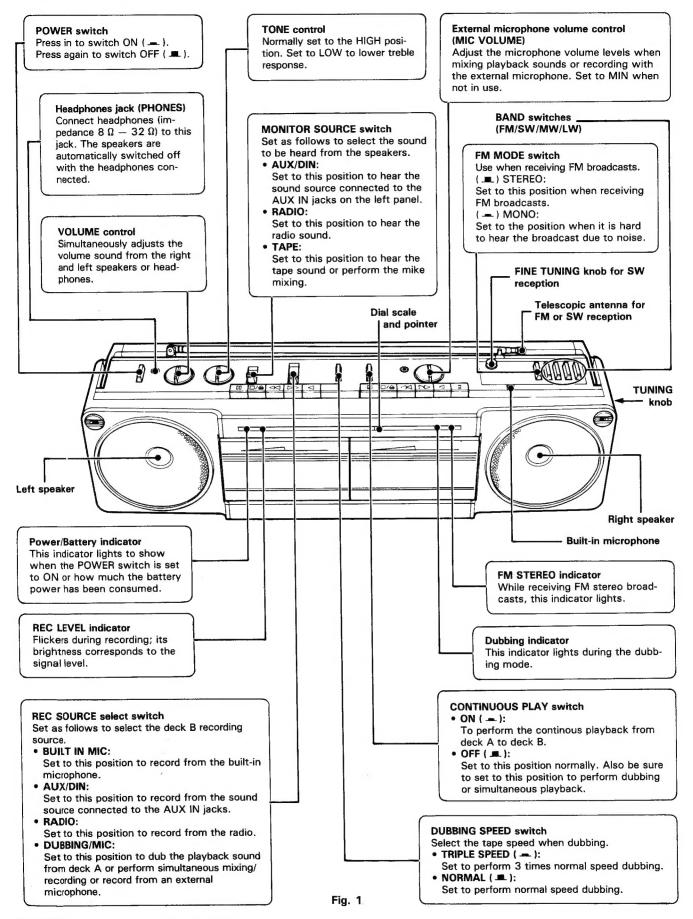

with batteries

Approx. 3.5 kg (7.7 lbs)

without batteries

Design and specifications are subject to change without notice.

### Names of Controls and Their Functions

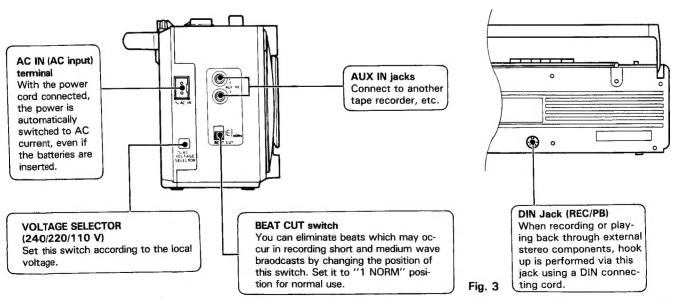

#### MIC/(MIXING MIC) jack Cassette operation buttons (Deck A) When recording or mixing using microphone, connect II PAUSE button microphone (with an impedance of 200 $\Omega$ to 2 k $\Omega$ ) to this jack. Press to stop the tape temporarily. To release In the monaural mode, the sound from the microphone will be the pause mode, press again this button. emitted from the right and left speakers. ■/ STOP/EJECT button Press to stop the tape. Pressing this button after the tape stops opens the cassette holder FF button Cassette operation buttons (Deck B) Press this button to fast wind the tape from PAUSE button right to left. Press to stop the tape transport temporarily. In addition, this button is also used for music Press again to release the pause mode. scanning. **■**/**≜**STOP/EJECT button **REW** button Press to stop the tape while the tape is moving Press to wind the tape rapidly from left to right. or to open the cassette holder during the stop mode. In addition, this button is also used for music FF button scanning. Press to fast forward the tape from right to left. **PLAY** button **REW button** Press to play or scan the tape. Press to fast rewind the tape from left to right. SYNCHRO PAUSE RELEASE button **PLAY** button Press to release the pause modes of decks A Press to play back the tape. and B simultaneously for dubbing. **REC** button Press this button together with the < PLAY button for recording (or dubbing).

## **Location of Main Parts**

#### Rear side view

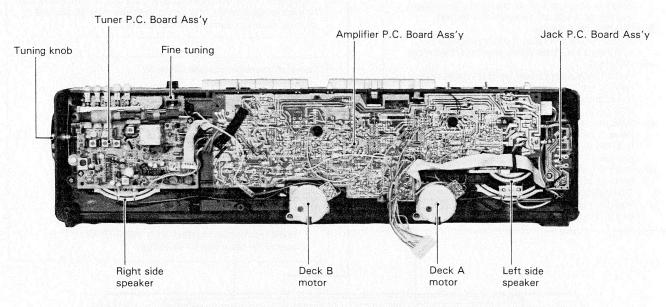

Fig. 4

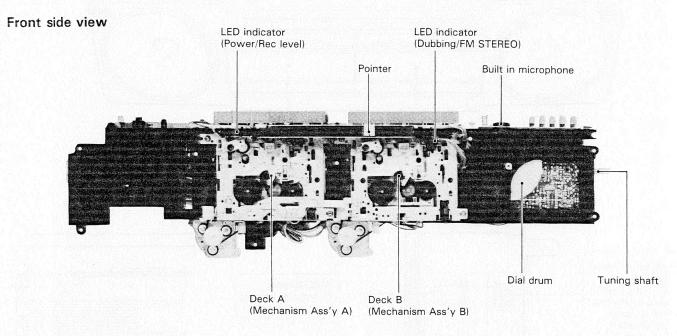

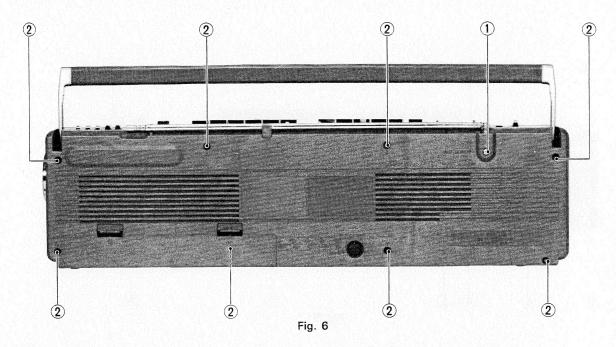

Fig. 5

### **Removal of Main Parts**

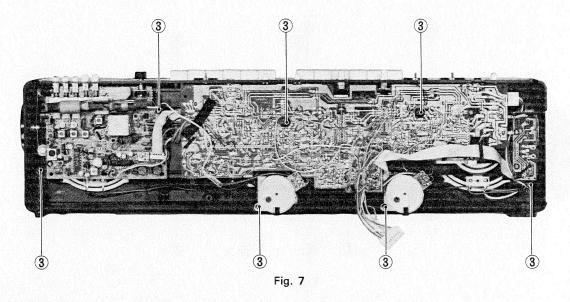

#### Replacing the rod antenna (Fig. 6)

1. Pull out screw (1): SDSP3010R, then replace the rod antenna.

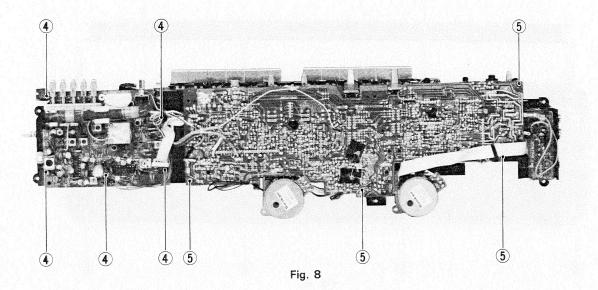

#### Removing the rear cabinet (Fig. 6)

- 1. Unscrew eight screws (2): SBSF3035Z.
- 2. Remove the antenna, then pull out the receptacle wire from the power supply P.C. Board.
- 3. Remove the connector on Din P.C. Board.

#### Removing the chassis Ass'y (Fig. 7)

- 1. Unscrew seven screws 3: SBSF3014C.
- 2. Remove the tuning knob and push knob from the tuner P.C. Board, then remove the volume knob from the Amp P.C. Board.
- 3. Disengage speaker connector wire CN801, then remove the chassis Ass'y sliding it towards the tuner P.C. Board (Left).

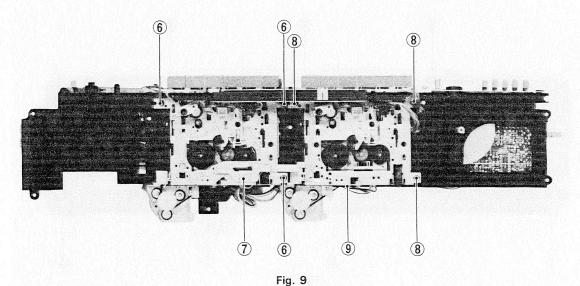

#### Removing the tuner P.C. Board (Fig. 8)

Unscrew four screws 4: SBSF3010Z, then disengage the parallel wire of CN1 to remove the tuner P.C. Board. (For the direction of insertion, see the servicing diagram of the P.C. Board.)

#### Removing the Amp P.C. Board (Fig. 8)

1. Unscrew four screws (5): SBSF3010Z, then remove the Amp P.C. Board from the chassis.

(Note) When installing it again, position the lever so that the REC button operation is interlocked with the REC/PLAY select switch.

### Removing the cassette mechanism Ass'y (A) (Fig. 9)

- 1. Unscrew three screws 6: SBSF3008Z and collar screw 7 to remove the lever Ass'y.
- 2. Disengage connectors CN802 and CN804 to remove the cassette mechanism Ass'y (A)

### Removing the cassette mechanism Ass'y (B) (Fig. 9)

- 1. Unscrew three screws 8: SBSF3008Z and screw 9: SDST2605Z.
- 2. Disengage connector CN803, then unsolder the head wire from the Amp P.C. Board.

#### Removing the Mechanism Parts

Also see the exploded view of the cassette mechanism Ass'y on page 28.

#### Removing R/P head 6 (Fig. 10)

- 1. Unsolder the head wire.
- 2. Unscrew screws 9 and 10 to remove the R/P head

(When installing it again, be sure to refer to the standards for the cassette mechanism on page 12.)

#### Removing erase head (11) (Fig. 10)

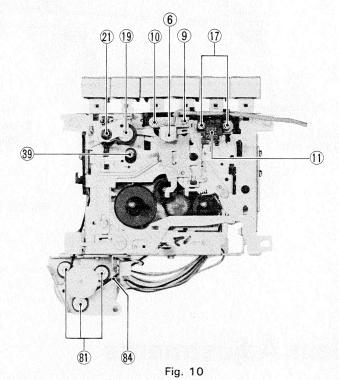

1. Unscrew two screws 17 to remove the erase head. (In the case of mechanism B, unsolder the head wire.)

#### Removing pinch roller Ass'y (19) (Fig. 10)

1. Pull out stopper 21, then remove the pinch roller Ass'y together with the pinch roller spring.

#### Removing motor Ass'y 85 (Fig. 10 and 11)

- 1. Disengage main belt 84.
- 2. Remove three screws (81) .
- 3. Unsolder the wires to remove the motor Ass'y.

#### Removing flywheel Ass'y 37 (Fig. 10 and 11)

- 1. Unscrew screws 42 and 118, then remove flywheel bracket 41.
- 2. Disengage main belt 84 .
- 3. Pull out washers 39, taking care not to lose them. (When installing them again, screw 42 cannot be fully tightended. It is ok as long as there is no clearance with the bracket.)

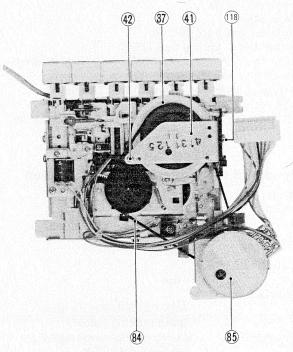

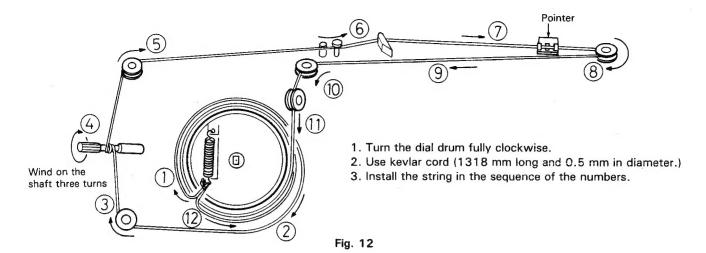

Fig. 11

### **How to Engage Dial Cord**

### Main Adjustments

#### [I] Equipment and Measuring Instruments used for Adjustment

- 1. Electrical adjustment
  - 1) Electronic voltmeter
  - 2) Audio frequency oscillator (range: 50-20 kHz and output 0 dB with impedance 600 Ω)
  - 3) Attenuator
  - 4) Standard tapes for REC/PB

Maxell UD - Normal tape (TS-5) TDK SA - Chrome tape (TS-6) or equivalent JVC ME - Metal tape (TS-7)

5) Reference tapes for playback (JVC Test Tape) VTT702 (for head azimuth adj. (10 kHz)) VTT712 (for motor speed, wow flutter adj.) or **VTT656** 

VTT664 (for reference level 1 kHz)

VTT739 (for playback frequency response)

VTT6447 (for music scanning) VTT6448 (for music scanning)

6) Resistors

600  $\Omega$  (for attenuator matching)

2. Mechanical adjustment

Torque testing cassette gauge.

3. Tuner section adjustment

SSG (standard signal generator). Sweep signal generator.

#### Adjustment of the Cassette Amplifier Section

[Conditions]

: AC 240/220/110 V Power supply

or DC12V

Volume : High

Tone : High

MONITOR SOURCE

REC SOURCE select

switch

switch

**DUBBING SPEED** 

: Tape

: AUX (DUBBING in the triple

speed dubbing mode)

: During normal speed dubbing, set to NORMAL ( ... ).

During triple speed dubbing, set to TRIPLE SPEED ( - ).

**CONTINUOUS PLAY** 

switch : OFF ( 💻 ).

Output jack : A load of 3.2  $\Omega$  is connected

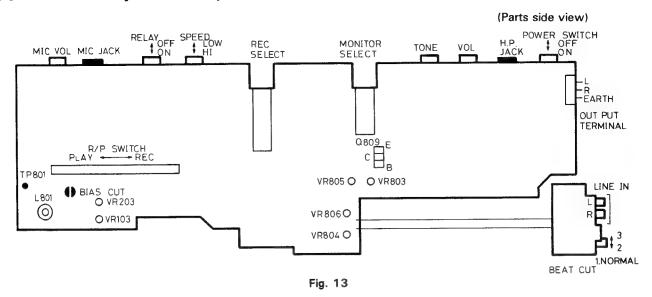

across speaker connector

CN801.

: AUX IN -8 dBs Rated input

**BEAT CUT switch** : 1 NORM

#### [II] Location of Adjustment (Amplifier and Mechanism)

#### [III] Adjustment

| Item   | Tape used                     | Adjustment method   | Adjusting point                   |
|--|-------------------------------|---|-----------------------------------|
| Head azimuth ad-<br>justment                       | Test tape VTT 658<br>(10 kHz) | Using side A, adjust so that phase difference is minimum when the output is maximum.  | R/P head azimuth adjustment screw |
| Tape speed adjustment and wow & flutter check      | Test tape VTT 656<br>(3 kHz)  | Mechanism A During normal speed dubbing: 3,000 Hz $\pm$ 10 Hz During triple speed dubbing: 9,030 Hz $\pm$ 30 Hz Mechanism B During normal speed dubbing: 2,990 Hz $\pm$ 10 Hz During triple speed dubbing: 9,000 Hz $\pm$ 30 Hz Adjust to the above-mentioned frequencies. Adjust in the order of normal speed dubbing, then triple speed dubbing. During the triple speed dubbing adjustment, shortcircuit between the collector and emitter of Q809. Wow and flutter should be 0.35% or less (JIS·RMS). | VR803<br>VR805<br>VR804<br>VR806  |
| Bias frequency adjustment                          |                               | Adjust so that the frequency at erase head test point TP801 is 86 kHz. Connect a 100 k $\Omega$ resistor in series with the counter. (during normal speed dubbing)  | L801                              |
| Bias current     adjustment                        | TS-5: Normal                  | Input 1 kHz and 8 kHz signals with a level of $-20$ dB (specified input) to AUX IN, then alternately record them using mechanism B. Adjust so that the difference in level between these signals is $0\pm1.5$ dB when they are played back.   | VR103<br>VR203                    |
| 5. Checking the record/playback frequency response | TS-5: Normal                  | Input 1 kHz, 125 kHz and 8 kHz signals with a level of $-20$ dB (specified input) to AUX IN, then alternately record them using mechanism B. When they are played back, 125 Hz should be $-3$ dB $\pm$ 3 dB with respect to 1 kHz. 8 kHz should be 0 dB $\pm$ 3 dB with respect to 1 kHz. When test tape VTT 674N is dubbed in the triple speed dubbing mode, 125 Hz should be $-1$ dB $\pm$ 3 dB with respect to 1 kHz. 8 kHz should be 0 dB $\pm$ 4 dB with respect to 1 kHz.                           |                                   |
| 6. Checking the playback output level (at DC 12 V) | Test tape VTT 663<br>(1 kHz)  | The level should be 4 W (3.6 V/3.2 $\Omega$ ) or more.  |                                   |

(Note) Complete tape speed adjustment within 30 seconds following running for one minute or more.

#### [IV] Standards for the Cassette Mechanism

Check the following items when the cassette mechanism parts have been replaced.

| Item   | Standard   | Test method   | Tape used                                |
|--|--|---|--|
| 1. Supply voltage  | Rated voltage: DC 12 V<br>Voltage range when the motor is used:<br>DC 8.6 to 13.0 V  | Constant-voltage regulated power supply   | <del></del>                              |
| 2. Tape speed  | 4.8 cm/s 2,970 to 3,045 Hz<br>(3000 Hz) (Mechansim A)<br>2,955 to 3,030 Hz<br>(Mechansim B)<br>Variation: within 30 Hz   | Digital frequency counter   | VTT 656 or VTT 712                       |
| 3. Wow & flutter   | 0.35% or less (JIS. RMS)   | Wow meter   | VTT 656                                  |
|  | PLAY 35 – 75 g.cm  | In the PLAY mode, there<br>should be no slippage bet-<br>ween the idler, reel, and  |  |
| 4. Winding torque  | FF 80-200 g.cm (mechanism A)<br>60-200 g.cm (mechanism B)  | take-up pulley when the reel is locked. Use torque gauge  |  |

| b) Discrimina                                 | te Waveform:                                | Adjust the discriminate T2 again so that above symmetrical IF waveform may be changed to balanced "S" curve waveform. |

#### Description ltem 3. AM RF ALIGNMENT 3-1 Conditions of the receiver. (1) Power source: Same as mentioned in item 1-1. **RADIO** (2) Function switch position: 50 mW (3) Volume control: Center position (4) SEA control: (5) Variable capacitor: Refer the following list shown in item 3-4. 3-2 Conditions of SSG. (1) Modulation: Refer the basic condition Refer the following list shown in item 3-4. (2) Frequency: Approx. 50 mW (3) Output level of the attenuator in SSG: Speaker terminals 3-3 Power output measuring position: 3-4 Alignment: Noise may be introduced by the VTVM into AM (MW) signals due to the mislocation of the measuring instrument. In such a case, use the jigs as illustrated. Band Select | Sort of Antenna to be Aligning

#### **FM MPX Alignment**

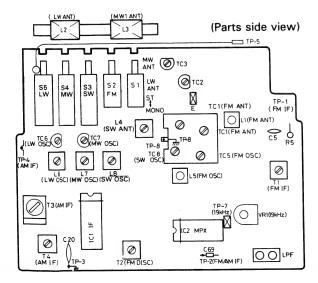

19 kHz Alignment (Regular Method)

- 1. Connect a frequency counter to the test point TP7 (earth = TP3).
- 2. Supply the monaural signal (98 MHz, 60 dB) across the antenna terminal.
- 3. Adjust the variable resistor VR1 so that the frequency becomes 19 kHz ± 100 Hz.

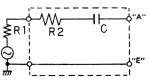

that the tuner can be obtained the best sensitivity.

Note: Attach a resistor (100 k $\Omega$ ) to the positive side cable shall be led from counter input.

#### Parts Arrangement for Alignment

**Dummy Antenna** 

 $R_1 + R_2 = 80 \Omega$  "A" TP-5 C = 10 pF"E" → TP-8 R<sub>1</sub>: Output impedance of S.S.G.
